Appendix A

Demographic Information

1. Age
2. Gender
3. Number of years in practice
4. Specialty
5. Estimate of number of patients with comorbid psychiatric or comorbid medical illness
   a. <25%
   b. 25-50%
   c. 50-75%
   d. >75%

Interview Questions

1. Tell me what your current practice does if a patient presents to your office/clinic that requires follow up with primary care services/mental health services?

2. Tell me about any barriers you’ve encountered with patients accessing care within other disciplines including primary care/mental health?

3. What is the hardest part about providing treatment (mental health or primary care) to patients in your current setting?

4. Tell me about a time when you encountered difficulty advocating for your patient requiring supplementary services.

5. What issues have you encountered as a provider in communicating or coordinating care with other disciplines/providers within these other disciplines?

6. Tell me about a time when you felt pressure to practice outside your scope of practice to meet the needs of your patient population.

7. What resources are available in your facility to be able to provide care to these complex patients? What is not available to you?

8. What do you think about integration of care between primary care and mental health?
9. Describe how you would change the current system to improve integration of primary care and mental health services. What are your recommendations for this?

10. What issues or barriers do you envision in integration of care?

11. Is there anything you want to add that you would want researchers/providers/policy makers to know or understand about your views on integration of care between primary care and mental health services?
