## **Executive Summary**

With the passage of the Postsecondary Education Improvement Act of 1997, Governor Paul Patton and the Kentucky General Assembly sought to improve the standard of living and quality of life in the state through increasing the educational attainment of its citizens. The production of bachelor's degrees by the state's public four-year universities is a key driver in increasing educational attainment and, therefore, meeting the goals of the legislation. This paper uses interrupted time series regression analysis to evaluate whether Kentucky public four-year universities have increased the rate at which bachelor's degrees are produced in the period of time since the passage of reform. For purposes of comparison, the paper also uses the same methods to evaluate the other forty nine states.

The results of the interrupted time series analysis show that public four-year universities in Kentucky significantly increased the rate at which bachelor's degrees were produced in the period of time after passage of the reform legislation. An analysis of the other states revealed that twenty-one other states showed an increase over the same time period greater than Kentucky's. Further study is recommended to better understand the variables that are driving the increases in bachelor's degree production at public four year universities in Kentucky and the other states.

## **Introduction**

On May 30, 1997, the Kentucky General Assembly passed House Bill 1<sup>1</sup>, the Kentucky Postsecondary Education Improvement Act of 1997. The legislation was intended to “lead to the development of a society with a standard of living and quality of life that meets or exceeds the national average” through the accomplishment of the following six goals by the year 2020.

1. “ A seamless, integrated system of postsecondary education strategically planned and adequately funded to enhance economic development and quality of life;
2. A major comprehensive research institution ranked nationally in the top twenty (20) public universities at the University of Kentucky;
3. A premier, nationally-recognized metropolitan research university at the University of Louisville;
4. Regional universities, with at least on (1) nationally recognized applied research program, working cooperatively with other postsecondary institutions to assure statewide access to baccalaureate and master’s degrees of a quality at or above the national average;
5. A comprehensive community and technical college system with a mission that assures, in conjunction with other postsecondary institutions, access throughout the Commonwealth to a two (2) year course of general studies designed for transfer to a baccalaureate program, the training necessary to develop a workforce with the skills to meet the needs of new and existing industries, and remedial and continuing education to improve employability of citizens; and
6. An efficient, responsive, and coordinated system of autonomous institutions that delivers educational services to citizens in quantities and of a quality that is comparable to the national average.”

House Bill 1 went on to say that “the achievement of these goals will only be accomplished through increased educational attainment at all levels...”

As increased educational attainment is said to be necessary to achieving the goals of the reform legislation, this paper intends to study the production of bachelor’s degrees by Kentucky public four-year universities in the years since its passage.

## **Statement of the Problem**

One of the desired outcomes of the Kentucky Postsecondary Education Improvement Act of 1997 passed by the Kentucky General Assembly was to increase the educational attainment of the citizens of the Commonwealth of Kentucky. The production of bachelor's degrees by Kentucky public four-year institutions is a significant driver in achieving this goal. This paper will seek to understand whether the rate of bachelor's degree production at public four-year institutions in Kentucky is higher since the passage of the reform legislation than in the twelve years before. It will also compare the change in the rate of bachelor's degree production in Kentucky to the other forty-nine states over the same time period.

## **Review of the Literature**

There have been at least two assessments of the Kentucky Postsecondary Education Improvement Act since its passage. The first study, "An Assessment of Postsecondary Education Reform in Kentucky <sup>2</sup>" was conducted five years after passage of the reform legislation in October 2002 by the National Center for Higher Education Management Systems (NCHEMS) for the Pritchard Committee for Academic Excellence. This assessment considered many of the areas that were included in the reform including an assessment of the production of degrees. The study noted that at that time, "reforms have yet to yield significant improvements in degrees granted – one of the principal concerns of the 1997 review".

A second study <sup>3</sup> of the reform was published in December of 2007, ten years after passage of the reforms. This study was also completed by NCHEMS and was commissioned by the Kentucky Chamber of Commerce's Taskforce on Postsecondary Education. Regarding degree production, the study noted that all public postsecondary institutions, including the

Kentucky Community and Technical College System, showed improvement in the production of degrees and credentials ten years after reform. This was determined by evaluating the nominal production of all degrees, Associates, Bachelor's, Master's, Doctoral and Professional, and credentials in 2006 compared to the production in 1997.

Another component of the study evaluated the production of bachelor's degrees relative to the number of high school graduates in the state six years earlier and relative to the universities' funding per student. This measure compared Kentucky to the other states and showed that Kentucky produced relatively fewer bachelor's degrees given the number of high school graduates six years earlier and given the funding per student. The report suggested that based on these findings Kentucky universities should become more efficient in the production of bachelor's degrees.

The Council on Postsecondary Education also has conducted analyses <sup>4</sup> to assess the progress since reform. This includes charting changes in degrees awarded and measuring the gap between Kentucky and the US average on the measure of Bachelor's degrees awarded as a percent of high school graduates six years earlier. The gap analysis shows that Kentucky is making progress on this measure and the gap is becoming smaller between Kentucky and the US average.

The University of Kentucky's Center for Business and Economic Research recently published an issue brief titled "Kentucky Ranks 33<sup>rd</sup> on Educational Index <sup>5</sup>" that ranked states based on an "educational index". A component of the index included a measure of the percent of the population aged 25 to 64 with a bachelor's degree or higher. The study found that Kentucky's rank had improved from 48<sup>th</sup> in 1990 to 33<sup>rd</sup> in 2009. The study noted that

postsecondary education was a smaller component of the index as the index was based on 12 measures, two of which were related to postsecondary education.

A study by Marvin Titus in 2009<sup>6</sup> assessed the impact of the financial aspects of state higher education policies on the production of bachelor's degrees. This study, based on data from 1992 to 2004, found that the production of bachelor's degrees was positively related to state appropriations for higher education and need-based financial aid. The study also noted that over the time period included in the study, there was a "convergence among states in the number of bachelor's degrees awarded per undergraduate enrollment in higher education institutions". "This convergence indicates that compared to states with initially high levels of bachelor's degrees per undergraduate enrollment, states with initially low levels are increasing their production of degrees at a substantially faster pace." While covering a different period of time, this finding is consistent with the gap analysis performed by the Council on Postsecondary Education for Kentucky and the US average.

Bachelor's degree production and educational attainment have become the focus of other states and the nation. A 2008 article by Travis Reindl<sup>7</sup> in the New England Journal of Higher Education made the case that more needs to be done in the New England states and the nation to improve the production of bachelor's degrees in order to meet the goal of having 55% of the adult population with college degrees by the year 2025. The article suggests that states place more emphasis on tracking performance on degree attainment and costs per degree. Further, it suggests that in order to improve performance on degree production and educational attainment that policy makers shift from making funding decisions based on student enrollment to allocating a portion of funding based on college persistence and completion.

## **Research Design**

This paper will use interrupted time series regression analysis to analyze changes in the trend of the production of bachelor's degrees at Kentucky public four-year universities in the twelve years before and after the passage of the 1997 postsecondary education reforms. The same regression analysis will be conducted for the forty-nine other states over the same time period and compared to the analysis in Kentucky. An analysis of the change in the coefficients (slope) will be used to determine if there is a change in the rate of bachelor's degree production in the pre-reform and post-reform period. A positive change in the coefficient in the post-reform period is interpreted as an increase in the slope of the regression line and therefore, an increase in the rate of the production of bachelor's degrees. A comparison of the slopes of the regression line was chosen instead of a change in the intercepts because the study is focused on changes in the trend line between the two periods. Understanding the slope allows one to understand if the trajectory of the bachelor's degree production has changed from the pre-reform period to the post-reform period. For example, the production of bachelor's degrees by a state in the post reform period could produce an intercept that is larger than the pre-reform period. However, the slope of the line may be lower than the pre-reform period indicating that the rate of increase has slowed in the post reform period. Because we are interested in observing a change in the rate of bachelor's degrees production, this study focuses on changes in the coefficients or slopes. The analysis of the change in coefficients in the regression for Kentucky public four-year universities will then be compared to the change in coefficients for the other forty nine-states.

The linear regression equation is as follows:  $y = \beta_1x_1 + \beta_0$

To complete the analysis, the number of bachelor's degrees awarded was collected for each public four-year university in each state for the academic years 1986-87 to 2008-09. The

source of the data was the National Center for Education Statistics at the United States Department of Education. The data was collected using the Integrated Postsecondary Education Database System (IPEDS) Peer Analysis Tool. The number of bachelor's degrees awarded by each public four-year institution was aggregated by state for use in the regression analysis. The bachelor's degree data from IPEDS is shown in appendix A.

### Analysis and Results

#### Kentucky

In the twelve year period preceding the passage of the Kentucky Postsecondary Education Reform Act, the regression analysis produced a coefficient of 257.4 suggesting that for each additional year, one could expect an additional 257.4 bachelor's degrees to be produced by the four-year universities in Kentucky. In the twelve year period after passage of the reform legislation, the coefficient of the linear regression equation increased to 350.7. These results suggest that the rate of production of bachelor's degrees by Kentucky public four-year universities increased by 36% in the twelve years after passage of the reform legislation. The results of the regression analysis for the pre- and post-reform periods were statistically significant at the 0.05 level.

Results of Interrupted Time Series Regression Analysis: Bachelor's Degrees Produced by Kentucky Public 4-year Institutions							
	Pre-Reform: 1986-87 to 1997-98			Post-Reform: 1997-98 to 2008-09			Percent Change in Coefficients
	<u>Coefficient</u>	<u>R<sup>2</sup></u>	<u>p-value</u>	<u>Coefficient</u>	<u>R<sup>2</sup></u>	<u>p-value</u>	
<b>Kentucky</b>	257.4	0.866	0.000	350.7	0.933	0.000	36.2%

#### Other States

A comparison of the other states shows that twenty-seven other states experienced an increase in the coefficients of the regression equation that were statistically significant at the 0.05 level in the period of time after passage of the Kentucky higher education reforms. It should be

noted that an additional ten other states (CT, IL, MI, MN, ND, OH, OR, RI, VT and WI) showed an increase in the coefficients but their results were not statistically significant at the 0.05 level.

Twenty-one of the other states with statistically significant results had a greater percentage increase in the coefficient in the post-reform period than Kentucky (36.2%). The following chart displays a summary of the results of the regression equation for Kentucky and the forty-nine other states. Complete detail of each regression analysis is found in Appendix B.

### Tests for Autocorrelation

The Durbin-Watson test was performed on each regression analysis for each state. Each analysis had one independent variable with a sample size of 12. The test was performed for a 0.05 level of significance. For regression analyses with a sample size of twelve, one independent variable and a 0.05 level of significance, the lower bound,  $dL$ , is 0.971 and the upper bound,  $dU$ , is 1.331. The results of each regression analysis in this study produced results of the Durbin-Watson tests greater than the lower bound and less than the upper bound. Therefore, it is not possible to conclude that there is the presence or absence of autocorrelation.

### Conclusion

The Postsecondary Education Improvement Act of 1997 sought to increase the standard of living and the quality of life in Kentucky comparable to the national average through increasing the educational attainment of its citizens. There are many measures of educational attainment including the proportion of the population with a bachelor's degree. This study sought to understand whether Kentucky public four-year institutions have increased the rate of producing bachelor's degrees in the period of time since passage of the reform legislation through interrupted time series regression analysis. Because the reform legislation has a goal of increasing educational attainment to the national average, this study also compared Kentucky to the other forty-nine states.

The results of the interrupted time series regression analysis suggest that Kentucky experienced a significant increase in the rate that bachelor's degrees were produced by public four-year institutions in the years after passage of the Kentucky Postsecondary Education Improvement Act of 1997. Additionally, an analysis of the other states showed that at least

twenty-one other states experienced a larger increase than Kentucky in the rate that Bachelor's degrees were produced by their public four-year universities over the same time period. Taken together, the results of the analysis for Kentucky and the other states suggest that while Kentucky has made considerable progress in bachelor's degree production since passage of the reform legislation, other states have as well. These findings are consistent with other evaluations of the Kentucky reform efforts.

Further study and analysis is necessary to understand what factors are driving the increase in the rate of production of bachelor's degrees by the public four-year universities in Kentucky and the other states to determine if the increase experienced by Kentucky differs from the increases in other states. Specifically, other studies should consider factors such as changes in state populations and the number of high school graduates in the states over these time periods as both are factors that might influence the rate at which public four-year universities produce bachelor's degrees. This may lead to a better understanding of the relationship between the reform efforts in Kentucky and the progress made in the production of bachelor's degrees relative to other states. Further, additional study of reform efforts in other states over the same time period would also be helpful.

As this study was limited to the twelve years before and after passage of the reform legislation, additional analysis is necessary to understand what level of bachelor's degree production will be required to reach the goals of the reform legislation and targets set by the Kentucky Council on Postsecondary Education (CPE) by the year 2020. This will need to include an analysis of the other ways the state can increase the educational attainment of the population such as attracting citizens to the state that already have bachelor's degrees and production of bachelor's degrees by private not-for-profit and private for-profit four-year

institutions in Kentucky. These types of analyses have been conducted by the CPE and will need continued revision as the year 2020 approaches.
