with structures and fill can also be major contributing factors.

Extensive recreation used. The degree of limitation is based on year-around use and would be less severe if not used during the winter and deal of difficulty or expense.

Some of these shales can shrink during dry periods and swell during wet periods, and cause cracking of foundations. Shale units are generally associated with steep slopes and, especially where springs are present, they are susceptible to landslides.

4. Limestone

5. Clay, silt, sand,
