Supplementary Figure 3. (a) Peak disease score from EAE animals shown in Figure 1a, n=6-53. (b) Daily (d.p.i) mean EAE animal weights from Figure 1a, where grey bar indicates treatment initiation period. (c, d) Data from experiments shown in Figure 1e, n=17-53. (e, f) Data from experiments shown in Figure 1i, n=8-9. (g, h) Data from experiments shown in Figure 3a, n=12-13. Peak disease scores by One-way ANOVA with multiple comparisons test. Data are mean ± SEM. Weights as change (g) from baseline per mouse. *P<0.05 **P<0.01, ***P<0.001, ****P<0.0001 by Two-way ANOVA as compared to vehicle. ###P<0.001 by Two-way ANOVA as compared to nor-BNI.
