This Map and Chart is brought to you for free and open access by the Kentucky Geological Survey at UKnowledge. It has been accepted for inclusion in Kentucky Geological Survey Map and Chart by an authorized administrator of UKnowledge. For more information, please contact UKnowledge@lsv.uky.edu.
The map shows the distribution of various mineral deposits and mining activities in Kentucky, with a focus on the Western Kentucky Fluorspar District. The map includes symbols and labels for mines, mineral occurrences, faults, and other geological features. The text explains that the database is the most up-to-date, geospatially accurate catalog for the district, containing information from property maps, field notes, drill logs, cross sections, summary reports, and reserve studies. It notes that the data is based on numerous rock samples, maps, notes, sections, and logs of mine data. The text also highlights that the map includes details about the early mining activity in the district, mentioning the importance of the data for understanding the geological history and mineral potential of the area. The text emphasizes the significance of the data set for researchers and mining professionals, providing a comprehensive view of the district's mineral resources.
