Investigation of Bacterial Content of Butter, especially directed toward Establishing Presence of Tubercle Bacilli by Animal Inoculation.

LEON H. LEONIAN—
The Physiology of the Endoconidia of Thielavia Basicola.

Bachelor of Science in Biology

RICHARD STOKES THOMAS—
Soil Acidity and Methods of Determination.

Bachelor of Science in Home Economics

VIRGINIA FRANCES ANDERSON—
Protective and Aggressive Resemblance among Common Animals.

Bachelor of Civil Engineering

RUSSELL FOSTER ALBERT—
WILLIAM WHITLOCK CLARKE—
BENJAMIN DAVID HOWE—
DAVID MCCORD PHELPS—
ARTHUR JINKS RANKIN—
Surveys, Maps, Designs and Specifications of a Sewer System for the City of Henderson, Kentucky.

CHARLES WILLIAM LOVELL—
Analysis of Physical and Chemical Properties of Kentucky Rock Asphalts.

ROBERT FITZHUGH MACLEAN—
Some Principles of Reinforced Concrete.

GILBERT BERRY HOUSE—
Selection of Materials for Macadam Roads.

Bachelor of Mechanical Engineering

For the past three years the seniors in Mechanical and Electrical Engineering have developed a combination thesis. The thesis this year consists in “A Study of Industrial Plant Design.” This thesis consists in the design of ten industrial plants together with the necessary power plants for driving the machinery, and lighting and heating the factory buildings.
One of the men was selected to act as Chief Draftsman and an Assistant Chief Draftsman was appointed to help supervise, rout the work, and keep the time system.

The several designs completed by the students are as follows:

**HARRY EDGAR MELTON AND MARGARET INGELS**

General supervision of thesis work consisting of complete records of materials, efficiency, working time, scheduling and routing of all work, and in the checking and correction of all drawings.

**JAMES WILLIAM THOMPSON, JR., AND HERMAN WORSHAM**

The Design of a Refrigerating and Cold Storage Plant together with auxiliary central energy station to furnish electrical current for lighting and power, and exhaust steam for heating—nineteen drawings. The cold storage plant is designed with a capacity of 10,000 barrels.

**JOSEPH MCKINSTER MAY AND CLAUDE COLUMBUS WATSON**

The Design of a Machine Shop for Technical College—twenty drawings. This shop is designed to accommodate one hundred men and to give them complete instruction in operating modern machine tools, and in shop methods. A separate power plant is designed to drive all machines in the shop, and also for furnishing light and heat.

**GEORGE L. CHERRY AND WEBB LAIL**

The Design of a Tobacco Redrying Plant for handling 120,000 pounds of loose leaf tobacco in a ten-hour day—eighteen drawings. The plant is designed to receive the loose leaf from the warehouse to redry the tobacco, and then pack it in hogsheads ready for storage or shipment. A power plant is included in the design to furnish current to drive the necessary machinery, to furnish steam for the redrying machines, and to light and heat the building.

**WILLIAM MEAD GLENN AND ERNEST HAROLD CLARK**

The Design of a Machine Shop to Manufacture Complete Cylinder Equipment for Steam Engines—eighteen drawings. This plant is designed to have a capacity of twenty-five finishes: cylinders per eight-hour day. A separate power plant accompanies the design.

**CHARLES KEMPER DUNN AND MITCHELL SANBORN SULLIVAN**

The Design of a Parquetry Flooring Mill—twenty-two drawings. This mill is designed to manufacture various kinds of parquetry flooring from hardwood. Dry kiln, storage yards, and planing mill are all included in the design. An auxiliary power plant furnishes exhaust steam for the dry kiln and power and light for the factory.

**JAMES DOUGLAS GARRETT AND ROBERT EDWARD HUNDLEY**

The Design of a Machine Shop for Manufacturing Southern Locomotive Valve Gears—twelve drawings. This plant is designed to manufacture ten valve gears per day, performing all the necessary operations from forging of the raw stock down to the assembling and shipping. The power plant is located in the factory building.

**FRED WHITELY AND AARON BOBOM HUFF**

The Design of a Machine Shop for Manufacturing Shrapnel Casings—twenty drawings. This plant is designed to manufacture eighteen-pounder British shrapnel with an output of 4,000 casings per day of twenty-two hours, employing 150 men in eleven-hour shifts.

**HOMER PARKS PARRIGIN and THOMAS CONWAY TAYLOR**

The Design of a Plant for Manufacturing Gas Engines—nineteen drawings. The plant is designed to finish and assemble gas engines of two, four and six horse-power, with a capacity of nine engines per day. The factory and separate power plant is of reinforced concrete.

**JULIUS WOLF**

The Design of a Private Branch Telephone Exchange for the University of Kentucky. This exchange is designed to furnish all telephone service for the entire University, permitting of intercommunication among all departments and connection to the Lexington exchange from this central switchboard.

Bachelor of Mining Engineering

**SAMUEL JEFFERSON CAUDILL**

Methods of Prospecting for Petroleum and Natural Gas, together with an Account of their Geology, Geographic Distribution and Uses.
Honor Graduates

To be eligible for "Commencement honors" a student must have been in attendance at this University three full years. No student shall be eligible who has incurred a condition, or who has not maintained the following minimum standard in scholarship.

50 per cent - A's
40 per cent - B's
10 per cent - C's

The names of those students who have maintained the required standard in scholarship are submitted by the Registrar to the faculties of their respective colleges. Each faculty considers carefully the character and personality of each candidate and reports to the Registrar its selections of honor graduates.
