From Print to Electronic
Using the Open Journal System to Publish an E-Journal
Open Journal System (OJS)

- Manages and publishes journals
- Open source
- Part of a suite of projects from the Public Knowledge Project (PKP)
  - Open Journals System (OJS)
  - Open Monograph Press (OMP)
  - Open Conference System (OCS)
  - Open Harvester System (OHS)
Regions Using OJS as of 2011

- East Asia & Pacific: 831
- Europe & Central Asia: 1142
- Latin America & Caribbean: 1959
- Middle East & North Africa: 76
- North America: 558
- South Asia: 193
- Sub-Saharan Africa: 302
- unknown: 742

Total: 5803

Current Use

Number of Journals Published on the Platform as of 2013 – 7,021

Features

• Local installation and configuration
• Total journal management
• Subscription module with delayed open access
• Comprehensive indexing
• Reading tools
• Email notification
Hosting Options

• Install OJS software on your server
  – No charge, download from PKP Server
  – You bear all set up and maintenance costs

• Install OJS on PKP servers
  – Fee varies on option chosen
  – Technical support
  – Options range in price from US$850 to US$2700
Site Administration

There is a new version of OJS available! You are currently using OJS 2.4.3.0. The most recent version is OJS 2.4.4.1. Please visit this page to download the most recent version and find upgrade instructions.

Beyond Agricultural Information Access—
Shared Learning Experiences in Solomon Islands

Peter Walton

ABSTRACT: A national agricultural information network has been established in the Solomon Islands which brings together a diverse range of organisations with a shared objective, that of improving access to and use of agricultural information. At the core of the information network is an information system comprising a range of bibliographic and other information databases. This builds on the success of a similar venture in neighboring Papua New Guinea. However, the Solomon’s initiative seeks both to disseminate information more widely and effectively, as well as incorporating a social knowledge networking dimension which renders it unique in the Pacific region. The network is underpinned by an appreciation that there are many and varied ways in which information can be transformed into knowledge. This includes innovative information and communication technologies such as community radio, distance learning centres and farmer information networks. At the heart of social knowledge networking is not just sharing of experiences and knowledge, but learning.

RESUMEN: En las Islas Salomón se ha establecido una red nacional de información agrícola que reúne a una serie de organizaciones con un objetivo común: mejorar el acceso a la información agrícola y el uso de la misma. En el centro de la red de información se encuentra un sistema de información que comprende una variedad de bases de datos bibliográficas e informáticas. La red aprovecha el éxito de una empresa similar en el vecino país de Papua Nueva Guinea. Sin embargo, la iniciativa de las Islas Salomón busca no solo difundir información de una manera más amplia y eficaz, sino también incorporar una dimensión de formación de redes de conocimiento social, lo que la hace única en la región del Pacífico. La red se apoya en una valorización de que son muchas y variadas las maneras en que se puede transformar la información en conocimiento. Esto incluye tecnologías innovadoras de información y comunicación como la radio comunitaria, los centros de educación a distancia y las redes de información de agricultores. En el centro de la formación de redes de conocimiento social no solo está el intercambio de experiencias y conocimientos, sino también el aprendizaje.

Resonant Solomon Islands is an archipelago comprising nine main islands located in the western Pacific, part of the region known as Melanesia. It has the second largest country in the Pacific in terms of land area (279,886 m², just slightly smaller than Belgium), with a population estimated to be 595,628 in 2009. It has a population growth rate of 2.3% (2009 est.), one of the highest in the world. Of the total land area, 97.3% is estimated to be forested, just 2.7% is farmed commercially or subsistence (2009). In common with its Melanesian neighbours, Papua New Guinea and Vanuatu, there is a high level of subsistence farming (87%), low levels of economic diversity such as manufacturing, and with similar constraints to economic activity such as a limited road network, poor inter-island shipping, limited power generation and supply, and a poor though improving telecommunication network. All of these factors constrain economic development in the country, such that GDP was estimated in 2009 to be USD 688 m, with a GDP growth rate estimated to be zero. Imports (food, plant and equipment, manufactured goods, fuels, chemicals) outstrip exports (timber, fish, copra, palm oil, cocoa) by a small margin (CIA, 2010).

Compounding similar problems faced by other Melanesian countries, ethnic tensions arose in the Solomon Islands in the late 1990s to the extent that a civil war broke out in all but name. From 1999 to 2003, civil unrest had a crippling effect on security and economic activity, and accelerated a decline in social conditions. In 2003, at the invitation of the Solomon Islands Government, the Australian-led Regional Assistance Mission to Solomon Islands (RAMSI) was deployed. Recovery from the troubles has been halting, with a significant flare-up in 2006. All of which has contributed to the country needing to completely rebuild the organs of state and provision of services to its people. One such initiative is the World Bank funded Rural Development Programme (RDP).

RDP is a five-year programme that comprises three components targeting four provinces: Choiseul, Malaita, Temotu and Western. The purpose of Component 1 is to assist the Ministry of Agriculture and Livestock (MAL)

Webinar on OJS, Toni Greider Presenter
What we learned (Production)

• Think through the entire process
• Learn everything you can about the system before you begin
  – What can it do
• What do you want to use
• Divide up the duties
  – System lends itself well to that – different people can have different roles
• Heavily promote it so your users know where to find the journal
What we learned (User)

- Let the user know about the advantages of the system
  - RSS Feeds
  - Reading tools (if configured)
Final Words of Wisdom

• Open access costs
• OJS provides an affordable venue
  – Downloaded software
    • Set up and maintenance costs
  – Hosted solution
    • Platform fee (reasonable)
Final Words of Wisdom

• Producing a quality journal is not inexpensive

• IAALD
  – Volunteers for reviewing
  – Volunteers for Editing
  – Outsources layout and proofreading

• A quality journal demands both quality editing and production
