Guiding Principles for the Index

http://www.nhspi.org/tools-resources/guiding-principles/

- Health security is multifactorial
- Health security is a shared responsibility – all sectors
- Broad definition of preparedness from PPD-8
- Disaster risk reduction and primary prevention as core concepts
- Must be practical and value-added
- Build on existing data sources: low-burden
- Align with existing capabilities and frameworks
- Accurately and completely reflect state and national preparedness
- Use transparent development process that is stakeholder driven, continuously improving, based on real-world experience
- Value of composite information exceeds sum of the parts
- Advance the science of preparedness measurement
Overarching Goals for the Index

- Increase awareness & understanding
- Stimulate dialogue, debate & discussion
- Encourage coordination & collaboration
- Facilitate planning & policy development
- Support benchmarking & quality improvement
- Drive research & development

Current Index Structure and Methodology

Michael Childress MS
UK Center for Business & Economic Research
Program Manager, PMO
Current Index Structure and Methodology

- 194 individual measures
  - Unweighted average
- 18 subdomains
  - Unweighted average
- 6 domains
  - Unweighted average
- State overall values
  - Unweighted average
- National overall values

Scaling
- Dichotomous: value of 0 or 10
- Continuous: % of maximum state value x10, remove outliers >+2SD
- Missing values imputed as average of nonmissing measures within subdomain
2014 Index Results

- National average: 7.5
- State overall results range from 6.5 to 8.4
Directions for Development & Refinement

Glen Mays, PhD MPH
Professor of Health Services Research, UK
Director, PMO
Validation studies with 2014 Index

- **Internal Consistency Reliability (ICR)**: testing at domain and subdomain levels
- **Multi-Trait Scaling Analysis (MTS)**: item to scale comparisons for convergence and discrimination
- **Sensitivity analyses**: testing alternative scaling, weighting, imputation algorithms
- **Comparison and trend tests**: use Bayesian latent variable methods to address uncertainty

Directions for Expansion and Refinement

- **Consolidation**: reduce correlated, redundant & noisy measures
- **Composition**: expand social, environmental, economic indicators of preparedness & resiliency
- **Alignment**: with established national frameworks
- **Grouping & weighting**: use empirical methods for internal consistency, discriminant power
- **Scaling**: reflect distributional properties
- **Comparisons**: address accuracy and uncertainty
- **Trending**: track changes via backward compatibility
Stakeholder engagement

- NAC provides overall **scientific & strategic guidance**
- Workgroups contain **representatives** from key scientific, policy, and operational sectors
- Solicit **online comments and feedback** from much larger groups of stakeholders
- Use iterative **online Delphi ratings** to inform key decisions on measures & methodology updates
- In-person workgroup meetings to make final decisions
- Monitor and evaluate **utilization and utility**
