Opportunities and Future Directions for the National Health Security Preparedness Index™

Glen Mays, PhD, MPH
University of Kentucky
glen.mays@uky.edu
Creating health security and community resiliency is a *collective action problem* that must be solved by aligning and coordinating the actions of government, private institutions, and individuals in ways that *prevent, protect against, prepare for, respond to, and recover from* all types of possible adverse health threats.
An Index theory of action

Should we do something?

What should be done?

Measurements

Comparisons

Public reporting

Is it working?

What’s my role?
**A brief history**

**Collaborative Development:** Partnership led by ASTHO, CDC, and >25 collaborating organizations

**December 2013:** Initial model structure and Index
- 5 domains and 14 subdomains
- 128 measures

**December 2014:** Revised model and Index
- 6 domains and 18 active subdomains
- 119 retained + 75 new = 194 measures
- 75% of retained measures have updated data

**Future Development:** Transition to RWJF, program management office at University of Kentucky
2015 Program Management Structure

NHSPI Program Management Office (UK)

PHSSR Stakeholders
Directions for Expansion and Refinement

- **Consolidation**: reduce correlated, redundant & noisy measures

- **Composition**: expand social, environmental economic indicators of preparedness & resiliency

- **Alignment**: with established national frameworks

- **Grouping & weighting**: use empirical methods for internal consistency, discriminant power

- **Scaling**: reflect distributional properties

- **Comparisons**: address accuracy and uncertainty

- **Trending**: track changes via backward compatibility
Planned validation studies with 2014 Index

- **Internal Consistency Reliability (ICR):** testing at domain and subdomain levels

- **Multi-Trait Scaling Analysis (MTS):** item to scale comparisons for convergence and discrimination

- **Sensitivity analyses:** testing alternative scaling, weighting, imputation algorithms

- **Comparison and trend tests:** use Bayesian latent variable methods to address uncertainty
Preliminary 2015 Timeline

2014 Release

- Call for new measures
- Validation studies
- Refine framework, constructs
- Secure data sources
- Refine measure set & specifications
- Test new scaling, weighting, imputation
- Test comparisons & trending
- Sensitivity analysis/simulation
- Finalize index calcs
- Update website
- Messaging

2016 Release

Dec Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec
Stakeholder engagement

- NAC provides overall scientific & strategic guidance
- Workgroups contain representatives from key scientific, policy, and operational sectors
- Solicit online comments and feedback from much larger groups of stakeholders
- Use iterative online Delphi ratings to inform key decisions on measures & methodology updates
- In-person workgroup meetings to make final decisions
- Monitor and evaluate utilization and utility
